WHAT ANTI HAS COST.

Every expense behind the site so far: the model usage that built it, and the hosting it runs on. Computed on 9 Nov 2026 from the 11 Claude Code sessions of this project (7 Nov 2026 to 9 Nov 2026).

- A turn is one model response. Tokens are in millions. Almost all input arrives as cache reads: the conversation is re-sent on every turn, and the cache makes that cheap.
- The cost is what these tokens would be billed at Anthropic's API list prices. On a Claude subscription (Pro or Max) the money actually paid is the subscription fee; this figure is the value used against it.
- Cache writes with no recorded lifetime are priced as 5-minute writes, the cheaper rate.

HOSTING AND EVERYTHING ELSE

ITEM	PLAN	COST SO FAR	NOTE
Web app	Vercel Hobby	$0	anti-social-opal.vercel.app
API	Render free web service	$0	sleeps after 15 minutes idle; a failed deploy leaves it down until the next one
Database	Render free Postgres	$0	1 GB; expires 30 days after creation (created 8 Nov 2026); images are stored in it
Domain	none	$0	a real launch needs one and a fresh database (passkeys are bound to the host)
Payments	fake Stripe	$0	nobody has been charged; Stripe fees start with live keys
Fonts, icons, libraries	open source	$0	Google Fonts are copied into the build, so visitors never contact Google
